

audit data collection made easy

baseline plus:

an NHS approved system from **cisiv**

In response to recent increases in demand for healthcare audits, Cisiv has extended its Baseline Plus platform to support these activities and now has flagship projects within the NHS.

baseline plus audit database

Designed to help gain a deeper understanding of drug prescribing within a centre with respect to outcomes of treatment and compliance with NICE guidelines.

case study

A major pharmaceutical company wanted to provide an easy-to-use database to help doctors audit treatment against NICE guidance. The tool needed to be simple to roll out, easy to extend and to deliver value to the units who would be using it.

Cisiv has provided the solution using Baseline Plus, our platform for prospective real world data capture. It is delivered over N3, the NHS network, and, as well as providing a full set of audit reports, allows units to download their own patient data for further analysis.

The system is being made available to units throughout the NHS over the course of 2011.

why choose baseline plus?

- compliant with NHS Information Governance (IG SoC)
- intuitive and easy to use
- bespoke reports generated according to user permission level
- video support reduces training time and cost
- rapid set up and implementation
- scalable from one site to hundreds of sites
- data protection and security (website hosted within the NHS N3 intranet)
